

React - 1

Q1. Create a React component named `Welcome` that renders the text "Welcome to React!".

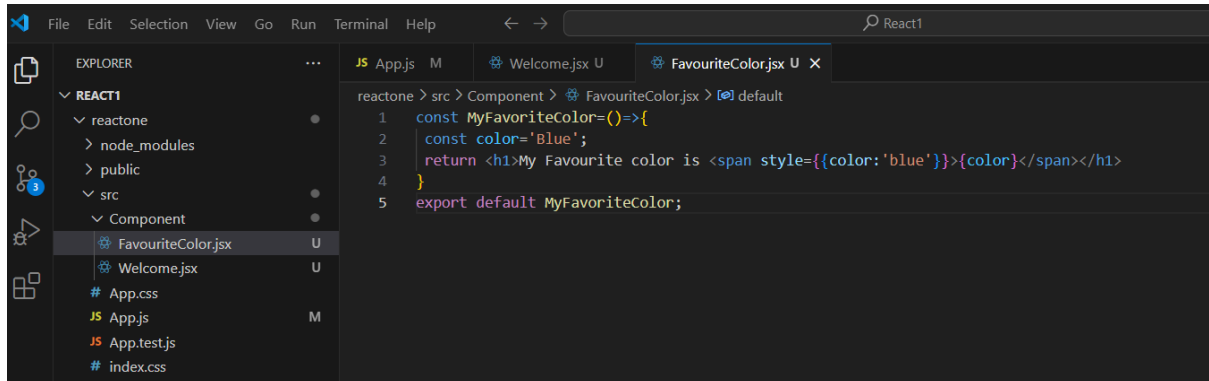

The screenshot shows the Visual Studio Code editor with a project named 'React1'. The Explorer panel on the left shows the file structure: 'reactone' (containing 'node_modules', 'public', and 'src'), and 'src' (containing 'Component' and 'Welcome.jsx'). The 'Welcome.jsx' file is selected and open in the editor. The code in the editor is as follows:

```
1 const Welcome=()=>{
2
3   return <h1>Welcome to React!🥳</h1>
4 };
5
6 export default Welcome;
7
```

The bottom panel shows the 'TERMINAL' tab with the output: 'Compiled successfully!' and 'You can now view reactone in the browser.'

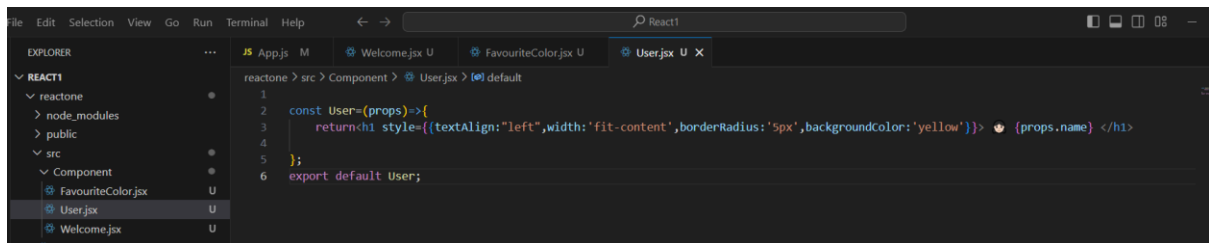

Q2. Write a React component that displays your favorite color using JSX syntax.

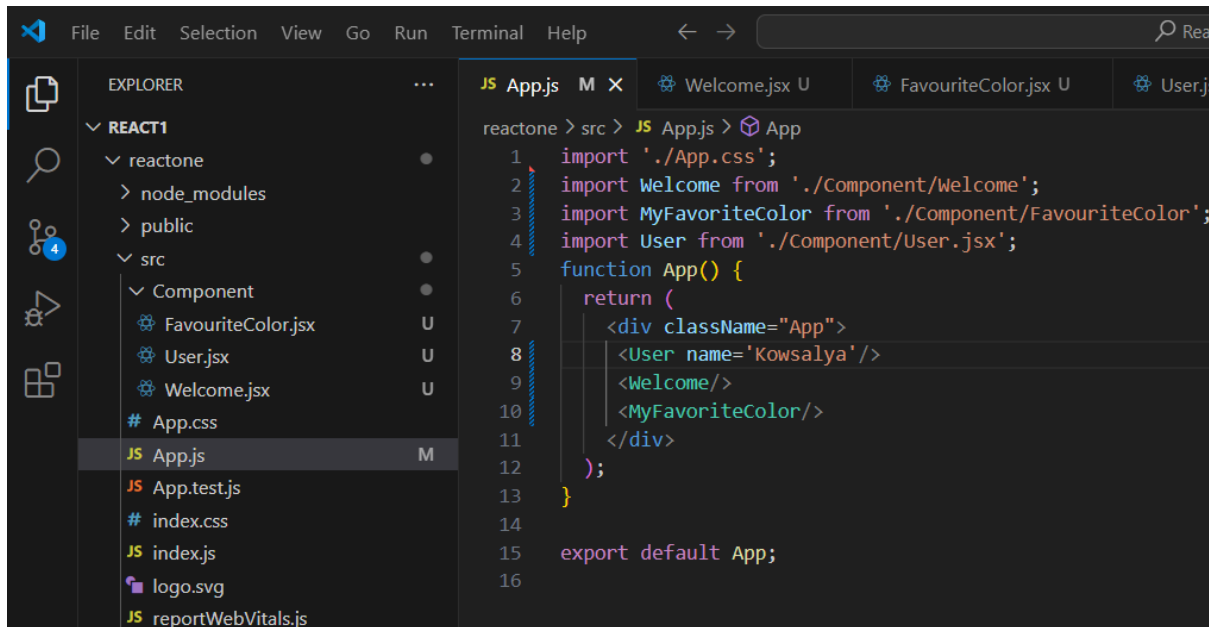

The screenshot shows the Visual Studio Code editor with the same project 'React1'. The Explorer panel shows the file structure, and 'FavouriteColor.jsx' is selected and open in the editor. The code in the editor is as follows:

```
1 const MyFavoriteColor=()=>{
2   const color='Blue';
3   return <h1>My Favourite color is <span style={{color:'blue'}}>{color}</span></h1>
4 }
5 export default MyFavoriteColor;
```

Q3. Create a component named `UserProfile` that takes a `name` prop and displays it inside an `<h1>` tag.

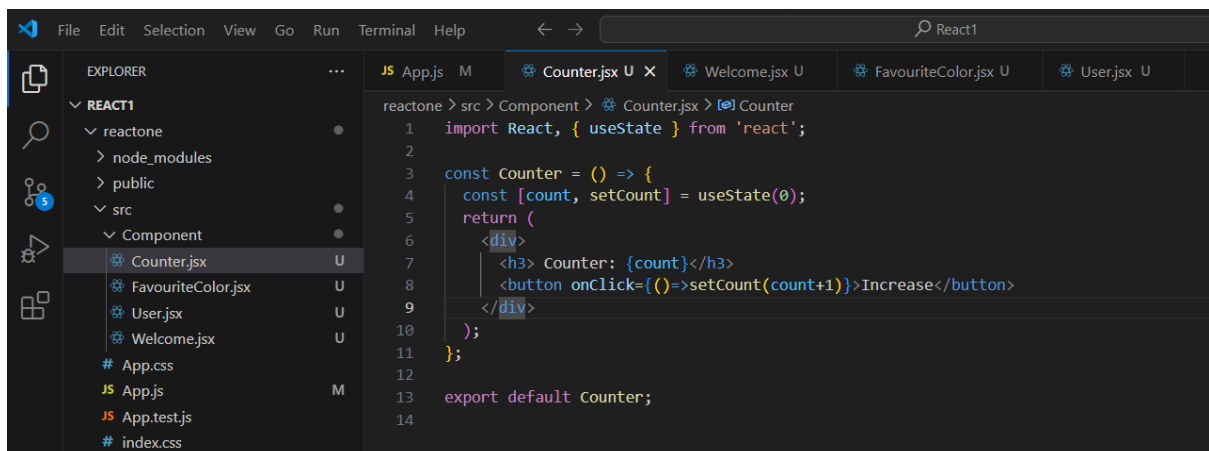

```
1
2 const User=(props)=>{
3   return<h1 style={{textAlign:'left',width:'fit-content',borderRadius:'5px',backgroundColor:'yellow'}}> {props.name} </h1>
4
5 };
6 export default User;
```

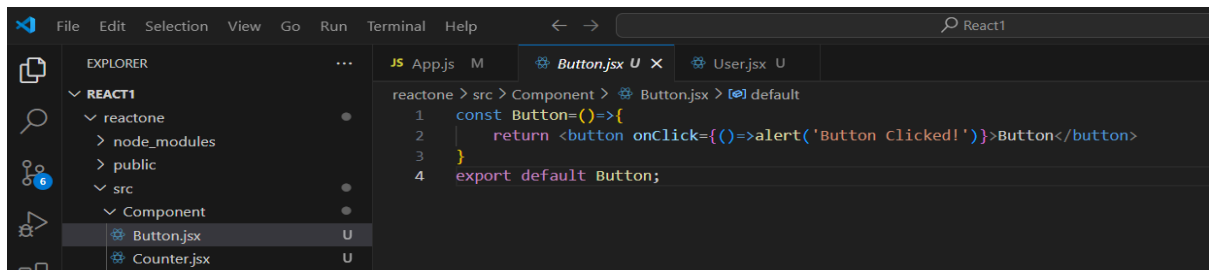

```
1 import './App.css';
2 import Welcome from './Component/Welcome';
3 import MyFavoriteColor from './Component/FavouriteColor';
4 import User from './Component/User.jsx';
5 function App() {
6   return (
7     <div className="App">
8       <User name='Kowsalya' />
9       <Welcome />
10      <MyFavoriteColor />
11    </div>
12  );
13 }
14
15 export default App;
```

Q4. Create a component named **Counter** that initializes a counter state to 0 and displays it. Include a button to increase the counter by 1 when clicked.

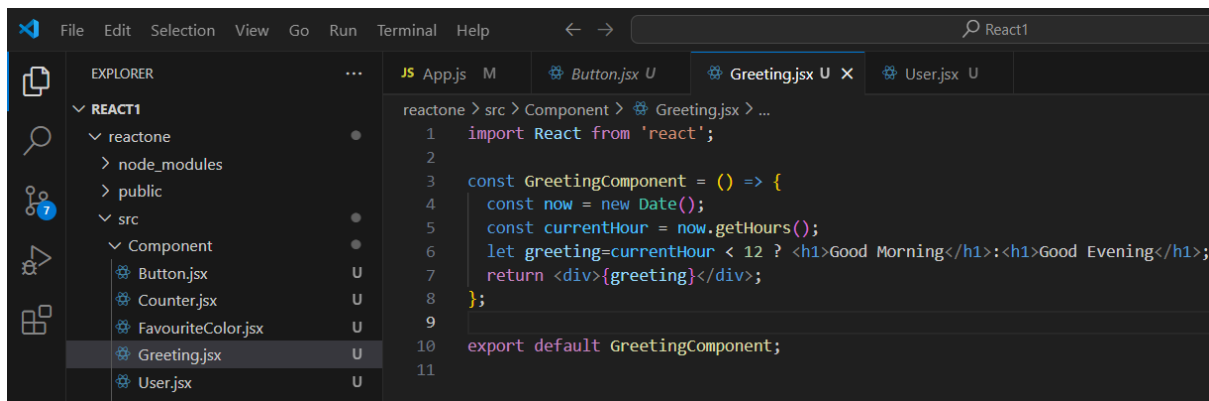

```
1 import React, { useState } from 'react';
2
3 const Counter = () => {
4   const [count, setCount] = useState(0);
5   return (
6     <div>
7       <h3> Counter: {count}</h3>
8       <button onClick={()=>setCount(count+1)}>Increase</button>
9     </div>
10   );
11 };
12
13 export default Counter;
```

Q5. Create a component that includes a button. When the button is clicked, it should display an alert with the message "Button clicked!".

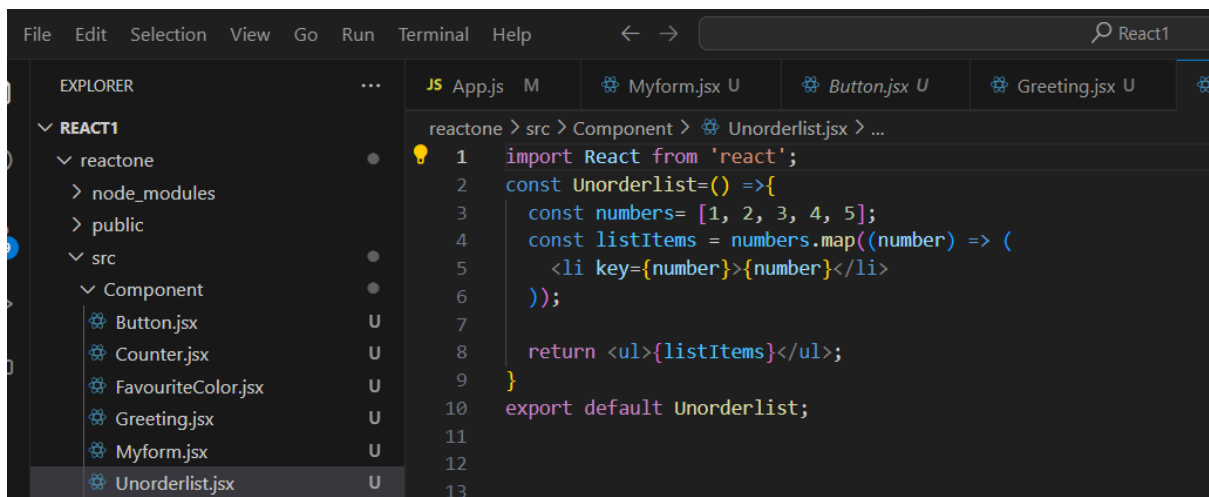

```
1 const Button=()=>{
2   return <button onClick={()=>alert('Button clicked!')}>Button</button>
3 }
4 export default Button;
```

Q6. Write a component that displays "Good Morning" if the current time is before noon, and "Good Evening" otherwise.

```
1 import React from 'react';
2
3 const GreetingComponent = () => {
4   const now = new Date();
5   const currentHour = now.getHours();
6   let greeting=currentHour < 12 ? <h1>Good Morning</h1>:<h1>Good Evening</h1>;
7   return <div>{greeting}</div>;
8 };
9
10 export default GreetingComponent;
```

Q7. Create a component that takes an array of numbers and renders each number in an unordered list.

```
1 import React from 'react';
2 const Unorderlist=() =>{
3   const numbers= [1, 2, 3, 4, 5];
4   const listItems = numbers.map((number) => (
5     <li key={number}>{number}</li>
6   ));
7
8   return <ul>{listItems}</ul>;
9 }
10 export default Unorderlist;
```

Q8. Create a simple form with a text input field and a submit button. When the form is submitted, display the text entered in the input field below the form.
